PROFESSIONAL SUMMARY

Data Analyst skilled in cleaning, modeling, and analyzing real-world datasets with SQL Server, Python, and Excel, and in building interactive Power BI dashboards that turn raw data into clear business insights. Experienced across the full analysis workflow: data validation, exploratory analysis, data modeling, DAX measures, KPI design, and actionable recommendations. Detail-oriented and analytical, with a portfolio of five end-to-end projects, including four published interactive dashboards. Expanding into cloud and machine learning through the AWS ML Engineer track.

TECHNICAL SKILLS

Data Analysis: Exploratory Data Analysis (EDA), Data Cleaning & Validation, Data Wrangling, Statistical Analysis, Business Insights

BI & Visualization: Power BI (DAX, Power Query, Data Modeling, Interactive Dashboards, Drill-through), Excel Dashboards, Matplotlib, Seaborn

Databases & SQL: Microsoft SQL Server (SSMS), T-SQL, MySQL, Joins & CTEs, Staging Tables, Database Design

Programming: Python (Pandas, NumPy, Matplotlib, Seaborn), SQL, C++

Excel: Power Query, Pivot Tables & Pivot Charts, Advanced Formulas, Dashboard Design

Cloud & ML: AWS (EC2, EBS, Session Manager), Machine Learning Fundamentals

Tools: Jupyter Notebook, Git & GitHub, Microsoft Word, PowerPoint

DATA ANALYSIS PROJECTS

Olist E-Commerce Analysis & Interactive Dashboard | SQL Server, Power BI, DAX

- Cleaned, validated, and analyzed 9 e-commerce tables in SQL Server using staging tables, relationship checks, and business-driven queries on sales, customers, payments, reviews, and delivery.
- Built an 8-page interactive Power BI report with a drill-through Decomposition Tree and a data model that avoids double counting, supported by 96 DAX measures.
- Found that 93.2% of timing-eligible delivered orders arrived on time, yet 53.8% of late reviewed orders received a 1-star review; credit cards account for 78.3% of payments.
  Live Dashboard | GitHub

Superstore Sales Analysis | Python, Power BI

- Analyzed 9,994 sales transactions (2019-2022) to evaluate sales performance, profitability, and key business drivers; cleaned, validated, and transformed the data and performed EDA across categories, products, customers, regions, and time.
- Identified a strong negative relationship between discounting and profit margin (r = -0.92), with Furniture generating ~$199K in losses despite $2.36M in sales.
- Built an 8-page interactive Power BI dashboard covering sales, profitability, discounts, products, customers, and geography, with recommendations to improve discount strategy.
  Live Dashboard | GitHub

Layoffs Data Analysis | Python, Power BI

- Cleaned and standardized a real-world layoffs dataset (missing values, categorical fields, data types, date features) and performed EDA by company, country, industry, year, and company stage.
- Built 9 visualizations and an interactive Power BI dashboard with Year, Company, Country, Industry, and Stage slicers.
- Identified 2022 as the peak year for layoffs (161,711 employees, ~41.9% of total records) and a weak correlation between funding raised and layoffs.
  Live Dashboard | GitHub

Billionaires Wealth Analysis Dashboard | Power BI

- Built a 3-page interactive dashboard (Overview, Geography, People & Sectors) analyzing the wealth of 475 billionaires by country, sector, wealth origin, gender, and birth decade.
- Designed KPI cards, cross-filtering slicers, and an interactive world map; showed the US holds ~$3.15T of $7.04T combined wealth and 65.1% of billionaires are self-made.
  Live Dashboard | GitHub

Car Sales Analysis | Microsoft Excel (Power Query, Pivot Tables, Excel Dashboard)

- Cleaned and transformed car sales data using Power Query and created six analytical features for time, income, and affordability analysis.
- Built Pivot Tables, Pivot Charts, KPIs, slicers, and 11 visualizations in an interactive sales dashboard.
- Analyzed sales by companies, models, dealers, cities, body styles, transmission types, and customer segments to identify key business trends.
